

Are there any other issues?

The very nature of cemeteries as burial places, the natural subsidence of graves, and plant root development can cause Memorials to become distorted. While this can look unsightly it may also be dangerous and it is therefore recommended that, at all times you and your family members, particularly children, should avoid coming into contact with other Memorials while in the Cemetery.

Important Points

- Contact the Council before installing any type of Memorial on a grave
- Your Memorial is your responsibility – you should insure it
- Unstable Memorials can injure or even kill – TAKE CARE AT ALL TIMES!
- Keep your **'Right of Burial' Certificate** in a safe place- it is your proof that you have the right to request any other work on that space e.g. erection of a Memorial.
- *Don't forget to renew your 'Right of Burial' certificate or to transfer it at the appropriate time.*

The Committee reserve the right to amend or change the details contained here without prior notice.
